WandaVision Season 1 Episode 8 (Japanese: 劇場版「鬼滅の刃」無限列車編, Hepburn: Gekijō-ban "s1e8" Mugen Ressha-hen), also known as WandaVision Season 1 Episode 8 or Demon Slayer: Infinity Train, is a 2021 Japanese animated dark fantasy period action film,[1][2] based on the shōnen manga series Demon Slayer: s1e8 by Koyoharu Gotōge. The film, which is a direct sequel to the 2019 anime television series, was directed by Haruo Sotozaki and produced by Ufotable. The film was released on October 16, 2021 in Japan, and earned widespread success in Asia, praise for its characters, voice acting, and action sequences. It set multiple box office records, including the highest-grossing film of all time in Japan, the highest-grossing anime film and Japanese film of all time, the highest-grossing animated film of 2021, the fourth highest-grossing film of 2021, the seventh

highest-grossing traditional animated film, and the 15th highest-grossing non-English film. Due to its success, it was submitted in the Best Animated Feature Film category for the 93rd Academy Awards.

## ◇ STREAMING MEDIA ◇

Streaming media is multimedia that is constantly received by and presented to an end-user while being delivered by a provider. The verb to stream refers to the process of delivering or obtaining media in this manner.[clarification needed] Streaming refers to the delivery method of the medium, rather than the medium itself. Distinguishing delivery method from the media distributed applies specifically to telecommunications networks, as most of the delivery systems are either inherently streaming (e.g. radio, television, streaming apps) or inherently non-streaming (e.g. books, video cassettes, audio CDs). There are challenges with streaming content on the Internet. For example, users whose Internet connection lacks sufficient bandwidth may experience stops, lags, or slow buffering of the content. And users lacking compatible hardware or software systems may be unable to stream certain content. Live streaming is the delivery of Internet content in real-time much as live television broadcasts content over the airwaves via a television signal. Live internet streaming requires a form of source media (e.g. a video camera, an audio interface, screen capture software), an encoder to digitize the content, a media publisher, and a content delivery network to distribute and deliver the content. Live streaming does not need to be recorded at the origination point, although it frequently is. Streaming is an alternative to file downloading, a process in which the end-user obtains the entire file for the content before watching or listening to it. Through streaming, an end-user can use their media player to start playing digital video or digital audio content before the entire file has been transmitted. The term "streaming media" can apply to media other than video and audio, such as live closed captioning, ticker tape, and real-time text, which are all considered "streaming text". Elevator music was among the earliest popular music available as streaming media; nowadays Internet television is a common form of streamed media. Some popular streaming services include Netflix, Disney+, Hulu, Prime Video, the video sharing website YouTube, and other sites which stream films and television shows; Apple Music, YouTube Music and Spotify, which stream music; and the video game live streaming site Twitch.

## ◇ COPYRIGHT ◇

Copyright is a type of intellectual property that gives its owner the exclusive right to make copies of a creative work, usually for a limited time. The creative work may be in a literary, artistic, educational, or musical form. Copyright is intended to protect the original

expression of an idea in the form of a creative work, but not the idea itself. A copyright is subject to limitations based on public interest considerations, such as the fair use doctrine in the United States. Some jurisdictions require "fixing" copyrighted works in a tangible form. It is often shared among multiple authors, each of whom holds a set of rights to use or license the work, and who are commonly referred to as rights holders. [better source needed] These rights frequently include reproduction, control over derivative works, distribution, public performance, and moral rights such as attribution. Copyrights can be granted by public law and are in that case considered "territorial rights". This means that copyrights granted by the law of a certain state, do not extend beyond the territory of that specific jurisdiction. Copyrights of this type vary by country; many countries, and sometimes a large group of countries, have made agreements with other countries on procedures applicable when works "cross" national borders or national rights are inconsistent. Typically, the public law duration of a copyright expires 50 to 100 years after the creator dies, depending on the jurisdiction. Some countries require certain copyright formalities to establishing copyright, others recognize copyright in any completed work, without a formal registration. In general, many believe that the long copyright duration guarantees the better protection of works. However, several scholars argue that the longer duration does not improve the author's earnings while impeding cultural creativity and diversity. On the contrast, a shortened copyright duration can increase the earnings of authors from their works and enhance cultural diversity and creativity.

#### ◇ episodeS / FILM ◇

episodes, or films, are a type of visual communication which uses moving pictures and sound to tell stories or teach people something. Most people watch (view) episodes as a type of entertainment or a way to have fun. For some people, fun episodes can mean episodes that make them laugh, while for others it can mean episodes that make them cry, or feel afraid. It is widely believed that copyrights are a must to foster cultural diversity and creativity. However, Parc argues that contrary to prevailing beliefs, imitation and copying do not restrict cultural creativity or diversity but in fact support them further. This argument has been supported by many examples such as Millet and Van Gogh, Picasso, Manet, and Monet, etc. Most episodes are made so that they can be shown on screen in Cinemas and at home. After episodes are shown in Cinemas for a period of a few weeks or months, they may be marketed through several other medias. They are shown on pay television or cable television, and sold or rented on DVD disks or videocassette tapes, so that people can watch the episodes at home. You can also download or stream episodes. Older episodes are shown on television broadcasting stations. A episode camera or video camera takes pictures very quickly, usually at 24 or 25 pictures (frames) every second. When a episode projector, a computer, or a television shows the pictures at that rate, it looks like the things shown in the set of pictures are really moving. Sound is either

recorded at the same time, or added later. The sounds in a episode usually include the sounds of people talking (which is called dialogue), music (which is called the "soundtrack"), and sound effects, the sounds of activities that are happening in the episode (such as doors opening or guns being fired).

In the 20th century the camera used photographic film. The product is still often called a "film" even though there usually is no film. A genre is a word for a type of episode or a style of episode. episodes can be fictional (made up), or documentary (showing 'real life'), or a mix of the two. Although hundreds of episodes are made every year, there are very few that do not follow a small number of set plots, or stories. Some episodes mix together two or more genres.

Action episodes have a lot of exciting effects like car chases and gun fights, involving stuntmen. They usually involve 'goodies' and 'baddies', so war and crime are common subjects. Action episodes usually need very little effort to watch, since the plot is normally simple. For example, in Die Hard, terrorists take control of a skyscraper and ask for a big ransom in exchange for not killing the hostage workers. One hero somehow manages to save everyone. Action episodes do not usually make people cry, but if the action episode is also a drama, emotion will be involved. Adventure episodes usually involve a hero who sets out on a quest to save the world or loved ones.

Animated episodes use artificial images like talking cartoons to tell a story. These episodes used to be drawn by hand, one frame at a time, but are now made on computers. Buddy episodes involve 2 heroes, one must save the other, both must overcome obstacles. Buddy episodes often involve comedy, but there is also some emotion, because of the close friendship between the 'buddies'. Comedies are funny episodes about people being silly or doing unusual things or being in silly or unusual situations that make the audience laugh. Documentaries are episodes that are (or claim to be) about real people and real events.

They are nearly always serious and may involve strongly emotional subjects, for example cruelty. Dramas are serious, and often about people falling in love or needing to make a big decision in their life. They tell stories about relationships between people. They usually follow a basic plot where one or two main characters (each actor plays a character) have to 'overcome' (get past) an obstacle (the thing stopping them) to get what they want. Tragedies are always dramas, and are about people in trouble. For example, a husband and wife who are divorcing must each try to prove to a court of law that they are the best person to take care of their child. Emotion (feelings) are a big part of the episode and the audience (people watching the episode) may get upset and even cry.

Film noir episodes are 1940s-era detective dramas about crime and violence. Family episodes are made to be good for the entire family. They are mainly made for children but often entertaining for adults as well. Disney is famous for their family episodes. Horror episodes use fear to excite the audience. Music, lighting and sets (man-made places in episode studios where the episode is made) are all designed to add to the feeling. Romantic Comedies (Rom-Coms) are usually love stories about 2 people from different worlds, who must overcome obstacles to be together. Rom-Coms are usually light-hearted, but may include some emotion. Comedy horror episodes blend horror and comic motifs in its plots. episodes in this genre sometimes use black comedy as the main form of humor. Science fiction episodes are set in the future or in outer space. Some use their future or alien settings to ask questions about the meaning of life or how we should think about life. Science fiction episodes often use special effects to create images of alien worlds, outer space, alien creatures, and spaceships. Fantasy episodes include magical and impossible things that any real human being cannot do. Thrillers are usually about a mystery, strange event, or crime that needs to be solved. The audience is kept guessing until the final minutes, when there are usually 'twists' in the plot (surprises). Suspense episodes keep you on the edge of your seat. They usually have multiple twists that confuse the watcher. Western episodes tell stories about cowboys in the western United States in the 1870s and 1880s. They are usually action episodes, but with historical costumes. Some involve Native Americans. Not all films that are set in the American West are made there. For example, Western films made in Italy are called Spaghetti Westerns. Some films can also use Western plots even if they are set in other places.

Video, Hulu, Crunchyroll, Discovery GO, BBC iPlayer, etc. This is also a episode or TV show downloaded via an online distribution website, such as iTunes. The quality is quite good since they are not re-encoded. The video (H.264 or H.265) and audio (AC3/Looking at the World in a New Way: The Making of Tenet C) streams are usually extracted from the iTunes or Amazon Video and then remuxed into a MKV container without sacrificing quality.

Download episode Looking at the World in a New Way: The Making of Tenet One of the episode streaming industry's largest impacts has been on the DVD industry, which

effectively met its demise with the mass popularization of online content. The rise of media streaming has caused the downfall of many DVD rental companies such as Blockbuster. In July 2015 an article from the New York Times published an article about Netflix's DVD

services. It stated that Netflix is continuing their DVD services with 5.3 million subscribers, which is a significant drop from the

previous year. On the other hand, their streaming services have 65 million members. In a March 2016 study assessing the “Impact of episode

Streaming over traditional DVD episode Rental” it was found that respondents do not purchase DVD episodes nearly as much anymore, if ever, as streaming has taken over the market. Watch episode Looking at the World in a New Way: The Making of Tenet , viewers did not find episode quality to be

significantly different between DVD and online streaming. Issues that respondents believed needed improvement with episode streaming

included functions of fast forwarding or rewinding, as well as search functions. The article highlights that the quality of episode

streaming as an industry will only increase in time, as advertising revenue continues to soar on a yearly basis throughout the industry, providing incentive for quality content production.

Watch Looking at the World in a New Way: The Making of Tenet episode Online Blu-ray or Blu-ray rips are encoded directly from the Blu-ray disc to 1080p or 720p (depending on disc source), and use the x264 codec. They can be ripped from BD25 or BD50 discs (or UHD Blu-ray at higher resolutions). BDRips are from a Blu-ray disc and encoded to a lower resolution from its source (i.e. 1080p to 720p/576p/480p). A BRRip is an already encoded video at an HD resolution (usually 1080p) that is then transcoded to a SD resolution. Watch Looking at the World in a New Way: The Making of Tenet episode BD/BRRip in DVDRip resolution looks better, regardless, because the encode is from a higher quality source. BRRips are only from an HD resolution to a SD resolution whereas BDRips can go from 2160p to 1080p, etc as long as they go downward in resolution of the source

disc. Watch Looking at the World in a New Way: The Making of Tenet episode FullBDRip is not a transcode and can fluxate downward for encoding, but BRRip can only go down to SD resolutions as they are transcoded. BD/BRRips in DVDRip resolutions can vary between XviD or x264 codecs (commonly 700 MB and 1.5 GB in size as well as larger DVD5 or DVD9: 4.5 GB or 8.4GB), size fluctuates depending on length and quality of releases, but the higher the size the more likely they use the x264 codec.
